

Weigh it once. The paperwork follows.

weighzIO runs the yard, the fleet and the waste records from one set of data, so a ticket raised at the bridge becomes the transfer note and the invoice without anyone typing it again.

WORKING DAY TO REPLY

Sixteen modules. One set of data.

Turn on what the yard uses today. Nothing is bundled in to pad a licence, and nothing is switched off when you grow.

 **01 Weighbridge**
Capture gross and tare at the bridge and print the ticket.

 **04 Orders**
Take the booking once and pass it to the yard.

 **02 Ticketing**
One ticket per movement, priced as it is raised.

 **05 Transport**
Plan runs, then see what each vehicle actually did.

 **03 Skip hire**
Deliveries, exchanges and collections against each skip.

 **06 Driver app**
Signatures, photos and weights from the cab.

 07 Waste tracking Digital records for every waste movement.	 12 Invoicing Invoice from tickets, in batches or on the day.
 08 Transfer notes Duty of care notes built from the ticket data.	 13 Haulier costs Self-bill subcontractors from the same movements.
 09 Permits Site permits, licences and expiry dates in one list.	 14 Accounts Credit limits, rates and site contacts per customer.
 10 Materials Stock in, stock out and what is left on the pad.	 15 Sites & plant Weighbridges, loading shovels and service dates.
 11 Aggregates Sales orders, haulage and delivered rates.	 16 Reporting Tonnages, splits and margin by site or customer.

A ticket touches four modules and is typed once

 **Weighbridge**
Gross 31.08 t, tare 12.66 t, net 18.42 t.

 **Ticketing**
Priced against the customer's site rate.

 **Waste tracking**
Transfer note built from the same movement.

 **Invoicing**
Added to the fortnightly batch.

**Bring your ticket book and we will
show you the same job in weighzIO**

Half an hour, on a call, with your own numbers.

Digital waste tracking

What is changing

Paper transfer notes are being replaced by a digital record of every waste movement. The duty of care does not change: the record does. Instead of a carbon copy in the cab, each movement is logged against a producer, a carrier and a receiving site.

For a skip hire firm this mostly means the data you already write on a ticket has to be captured once, in a form you can send on request.

The digital record

One record per movement. It starts when the skip is booked and closes when the material is weighed in at the receiving site.

- Producer and collection address
- Waste description and code
- Carrier, vehicle and driver
- Weight recorded at the bridge
- Receiving site and permit reference

Who holds what

The producer confirms the description. The carrier confirms the movement. The receiving site confirms the weight and the treatment. If you are all three — and a lot of skip hire firms are — you still need the three confirmations, they just happen inside one system.

Data you need before the deadline

Most yards already have this on paper. The work is getting it into fields rather than free text.

- A waste code against every material you accept
- Permit and licence numbers for each site
- Carrier registration for every vehicle, including subcontractors
- Weighbridge calibration dates

In the yard

Drivers should not be filling in a second form. In practice the driver confirms the collection on the tablet, the bridge records the weight, and the record completes itself.

Checklist

- Codes mapped to every material
- Permits and carrier registrations in one list with expiry dates
- Weighbridge feeding tickets directly
- Someone named as responsible for the monthly export

What a complete record looks like in weighzIO

A movement is marked compliant when the description, carrier, weight and receiving permit are all present. Green means compliant; it is the only status colour in the product.

Weighbridge, today — Leeds, bridge 1

TICKET	SITE	MATERIAL	NET (T)	RECORD
24817	Leeds	Mixed C&D	18.42	● Compliant
24818	Wakefield	Green waste	6.08	● Awaiting note
24819	Doncaster	6F2 subbase	22.15	● Compliant
24820	Leeds	Soil, non-haz	24.60	● Compliant

Recycled 62.4% · Recovered 24.1% · Landfill 13.5% · Tickets matched 98.4%

Talk to us

Tell us what the yard does now: how many sites, what the weighbridge feeds today, and where the paperwork gets stuck. A short call with someone who has stood on a weighbridge, and a price in writing.
