

Nick Brookes Group

WeighSoft System Rebuild

A unified cloud-native architecture replacing legacy multi-company silos, automating waste compliance, pricing engines, weighbridge scale feeds, and real-time fleet operations.

UNIFIED ARCHITECTURE

9 Operating Entities

Single master customer records, cross-company dispatch, and independent company VAT and ledger rules under one login.

WASTE & ENVIRONMENTAL

Automated Compliance

Automated EWC validation, digital Waste Transfer Notes, multi-tier tax & levy engines, and 1-click EA compliance reports.

EDGE & FLEET TELEMATICS

Scale & GPS Integration

Live RS232 weighbridge edge APIs, real-time Teletrac fleet GPS tracking, mobile driver apps, and background Sage posting.

⚠ THE CHALLENGE TODAY

Staff spend hours logging in and out between 9 different company accounts to manage orders, tickets, and vehicles, wasting time in manual notes and fragmented data silos.

✔ REBUILD SOLUTION & OPERATIONAL IMPACT

Run All Your Businesses From One Screen

✔ Staff log in once to manage orders, tickets, and fleet across all 9 companies instantly.

✔ Keeps waste & disposal rules organized without slowing vehicle operations.

✔ One clear, single customer record shared across all 9 operating businesses.

✔ Eliminates duplicate data entry and inter-company manual notes.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Add multi-company support to Platone core data architecture	4.0 d	8.0 d
Default organisation per user / instant organization switching	1.0 d	1.0 d
Environmental Services module architecture (core vs cloned module)	2.0 d	4.0 d
Regression testing & re-baselining existing tenants after Core schema changes	1.0 d	2.0 d
Redesign of tired Settings page and administrative configuration controls	1.0 d	1.0 d
Company-specific VAT settings, legal registration numbers, and financial rules	1.0 d	2.0 d
Company branded invoice templates, logos, remit addresses, and custom headers	1.0 d	2.0 d

⚠ THE CHALLENGE TODAY

WeighSoft fails to pull through customer discount rates automatically—forcing staff to look up prices manually, causing wrong charges, angry clients, and a mountain of credit notes.

✔ REBUILD SOLUTION & OPERATIONAL IMPACT

Automatic Discount Rate Pull-Through & Pricing Engine

✔ Customer rates apply automatically on every order and ticket, ensuring 100% correct pricing.

✔ Live credit alerts pop up during order entry to protect cash flow before vehicles leave yard.

✔ Eliminates credit note issuance and heavy administrative reconciliation work.

✔ Warns staff if customer waste site license or permit has expired before order is booked.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Customer sites (1-to-many sites per account, site contacts, site geo-addresses)	3.0 d	4.0 d
Customer lookup fields & tables: SIC code, zone, business type, postal area, priority, access times	2.0 d	4.0 d
Credit limits and live credit checking during order entry	2.0 d	4.0 d
Customer tax policy, carrier registration number, and WCID expiry tracking	1.0 d	3.0 d
Sage ledger account / Sage company mapping on customer + inbound account sync	5.0 d	8.0 d
Bespoke pricing per customer & Cash vs Invoice payment terms split	2.0 d	5.0 d
Cash customer to Account customer conversion workflow	1.0 d	2.0 d

⚠ THE CHALLENGE TODAY

Checking waste licenses manually takes time, risks illegal tipping penalties, and calculating three different tax tiers on materials is confusing and prone to human error.

✔ REBUILD SOLUTION & OPERATIONAL IMPACT

Automatic Waste Compliance & Multi-Tier Tax Engine

✔ Stops vehicles from tipping at unauthorized or unlicensed disposal outlets automatically.

✔ Tracks exact skip and RoRo container serial numbers across yards and customer locations.

✔ Calculates VAT, customer tax, and government levies automatically to protect material margins.

✔ Full digital Waste Transfer Note (WTN) compliance with automated EWC code validation.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Product extensions: activity, product group, VAT code, tax code, nominal codes	2.0 d	4.0 d
European Waste Catalogue (EWC) code register and assignment logic	1.0 d	2.0 d
Tip Outlet register: outlet CRUD, location, licence, weighbridge details, tip rates (buy/sell)	3.0 d	5.0 d
Restricted outlets & material-to-outlet automatic compliance validation	3.0 d	5.0 d
Levies configuration as a third tax tier on materials & disposal route lookups	3.0 d	6.0 d
Container register (skips & RoRos) and consignment tracking per physical unit	4.0 d	8.0 d
Waste Transfer Note (duty-of-care) & BRE SmartWaste digital waste model	3.0 d	6.0 d

⚠ THE CHALLENGE TODAY

Calculating vehicle weight limits by hand takes time, causes dispatch bottlenecks, and exposes Nick Brookes Group to severe road overloading fines.

✔ REBUILD SOLUTION & OPERATIONAL IMPACT

Automatic Load & Vehicle Matching Engine

✔ Splits large material orders into delivery tickets automatically (e.g. 200t into 10 tickets).

✔ Gives dispatchers instant capacity clarity without manual arithmetic on phone calls.

✔ Protects drivers and fleet assets from accidental DVSA road overloading violations.

✔ Validates product types against vehicle axle ratings before tickets leave dispatch.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Vehicle register extensions: vehicle type, default load size, max/tare weight limits	2.0 d	3.0 d
Part load tolerance, demurrage/waiting time thresholds, skip type suitability, driver sign-off	1.0 d	2.0 d
Vehicle/product type matching and real-time capacity validation on ticket creation	1.0 d	2.0 d

Order entry requires toggling between separate systems for skips vs concrete, and interrupted phone calls lose all unsaved typed order data, forcing staff to restart.

Fast, Streamlined Single-Screen Order Booking

- ✓ Cuts order-taking call times by up to half with unified side-panel entry.
- ✓ 'Save as Draft' lets staff pause orders when interrupted and resume without data loss.
- ✓ Auto-generates daily delivery tickets for multi-load aggregate & concrete orders in one click.
- ✓ Configures skip hire periods, rental day allowances, and automatic over-tonnage triggers.

Requirement / System Capability	Min Days	Max Days
Order entry rework: line-item-first entry with contextual order detail overlay	5.0 d	8.0 d
Skip order hire terms (allowance days, expiry dates, rental day allowance) & tonnage charges	4.0 d	8.0 d
Skip order pricing model (delivery, exchange, collection, weigh & load, reposition)	3.0 d	5.0 d
Material order handling: haulage buy/sell, disposal routes, wait time charges, site permits	4.0 d	6.0 d
Ticket auto-split of quantity across multiple delivery dates + recurring orders support	5.0 d	8.0 d
Draft / save order queue and real-time account risk warnings surfaced at order entry	2.0 d	4.0 d

Missing skip contamination photos risks losing ~£8,000 weekly in chargeable extras, causes customer disputes, and stalls operational ticket invoicing.

Protected Contamination Revenue & Complete Audit Trails

- ✓ Mandatory contamination photos link to tickets and surface directly on client invoices.
- ✓ Captures complete digital proof: arrival times, signatures on glass, tare & gross weights.
- ✓ Puts disputed jobs on hold automatically for office review before final billing.
- ✓ Tracks waste composition breakdown and bulky item surcharges seamlessly.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Ticket model extensions: order links, warnings, tip ticket references, buy/sell values	3.0 d	5.0 d
Ticket weights: gross, tare, net provenance, recorded vs requested variance metrics	1.0 d	2.0 d
Load breakdown / waste composition (% split per waste item) + bulky item breakdown	3.0 d	5.0 d
Contamination & query workflow: driver raises query, ticket held pending office review	2.0 d	4.0 d
Contamination evidence photos linked directly to order and embedded on customer invoice	2.0 d	3.0 d
Signatures (customer & driver sign-in/out), site timestamps, and demurrage calculations	3.0 d	7.0 d

Dispatch boards freeze when loading heavy ticket volumes across 5 vehicle planners, forcing rigid driver schedules and limiting fleet agility.

Lag-Free Drag-and-Drop Fleet Dispatch

- ✓ Virtualised planning screens render thousands of active tickets with zero UI lag.
- ✓ Cross-company planning allows sharing vehicle capacity across all 9 group companies.
- ✓ Unscheduled ticket queue lets dispatchers drag and drop jobs fluidly onto vehicles.
- ✓ Real-time container tracking shows exact physical skip positions and availability.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
5 distinct scheduling & dispatch views/filters (skips, tippers, concrete, artics, bulk)	2.0 d	3.0 d
Unscheduled Jobs dock with drag-to-assign & multi-day vehicle-by-day fleet grid	3.0 d	6.0 d
Job card virtualization / lazy loading for massive ticket volumes	1.0 d	2.0 d
Cross-company planning escalation to reassign vehicles across different legal entities	1.0 d	2.0 d
Scheduling view for hire-based products & bi-directional job-product linking	3.0 d	5.0 d
Skip container tracking (asset availability) & mobile "containers near me" API	3.0 d	5.0 d

Accounts staff must manually trigger Sage syncs for 6 of 9 companies (often out of hours) and resolve painful T21 Domestic Reverse Charge VAT errors by hand.

Automated Background Accounting & DRC VAT Compliance

- ✓ Invoices and tickets post automatically to Sage across all 9 operating companies.
- ✓ Generates and emails recurring monthly customer invoices automatically.
- ✓ Calculates T21 Reverse Charge VAT automatically, eliminating manual tax adjustments.
- ✓ Configures automated annual contract price uplifts (R10) across client bases.

Requirement / System Capability	Min Days	Max Days
Sage Integration core connector & automated background sync for all 9 entities	7.0 d	14.0 d
Nominal code mapping per product, tip outlet, and company for automated GL posting	1.0 d	3.0 d
Handling T21 Domestic Reverse Charge VAT on invoices and credit notes	2.0 d	4.0 d
Credit note multi-tier approval and authorization workflow	2.0 d	3.0 d
Recurring monthly billing automation with scheduled customer PDF dispatch	2.0 d	4.0 d
Annual price-uplift scheduling (R10 indexing across active customer accounts)	1.0 d	3.0 d

Weighbridge indicators communicate through fragile serial connections with no backup, forcing scale staff to re-type weights by hand and creating costly billing errors.

Direct Weighbridge Scale APIs & Live Teletrac Fleet Feeds

- ✓ Scale weights stream directly onto tickets in real-time, eliminating re-typing errors.
- ✓ Automated SMS & WhatsApp customer alerts update clients on truck ETA automatically.
- ✓ Live Teletrac GPS feeds display exact driver positions right on the planning board.
- ✓ Peak Telecom integration logs call volumes and dispatch team response times.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Weighbridge RS232 hardware integration & locally hosted edge API to Platone	5.0 d	12.0 d
Weighbridge-to-ticket plumbing (gross, tare, net capture, container tare, manual override)	3.0 d	5.0 d
Teletrac integration for live vehicle and driver location tracking on dispatch maps	3.0 d	5.0 d
Peak Telecom dashboard integration for call log tracking, volume & response reporting	4.0 d	7.0 d
WhatsApp / SMS / Twilio notification engine setup and automated notification templates	2.0 d	4.0 d
Google Ads value feedback loop & Mobile MDM fleet device management setup	2.0 d	4.0 d

⚠ THE CHALLENGE TODAY

Lack of real-time site verification and driver tracking leads to customer delivery disputes, delayed office follow-ups, and uncollected charges for extra material poured on site.

✔ REBUILD SOLUTION & OPERATIONAL IMPACT

Smart Field Operations & Instant On-Site Payment Links

✔ Geofences delivery sites automatically, recording arrival, waiting times, and departures.

✔ Generates 100% digital Waste Transfer Notes (WTNs) with customer signatures on glass.

✔ Drivers calculate over-quantity variances on site and text instant payment links to clients.

✔ Multi-company switching enables drivers to complete jobs for any group division seamlessly.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Mobile support for skip & material ticket completion (weights, load breakdown, variances)	5.0 d	8.0 d
Multi-organization support in driver mobile app + biometric/PIN job status security	2.0 d	4.0 d
Over-quantity material variance capture on mobile with instant surcharge calculation	3.0 d	5.0 d
On-site payment link generation (SMS/WhatsApp) for balances owing prior to discharge	4.0 d	7.0 d
Mobile "containers near me" lookup module & Apple App Store / Google Play submissions	2.0 d	4.0 d

Reporting, Portal & Compliance

13.0 – 27.0 Days

Target: 20.0 Days

⚠ THE CHALLENGE TODAY

Producing Environment Agency waste returns takes days of manual spreadsheet work, while key accounts constantly tie up office phone lines asking for ticket and disposal reports.

✓ REBUILD SOLUTION & OPERATIONAL IMPACT

Instant Compliance & Self-Serve Customer Portals

✓ Generates EA hazardous and non-hazardous waste consignment reports in 1 click.

✓ Executive dashboard displays real-time vehicle utilization, ticket throughput, and margin.

✓ Customer portal emails scheduled site recycling reports automatically to Tier-1 clients.

✓ Enables self-billing invoice generation for contracted commercial partners.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Consolidated monthly/annual reporting engine for orders, waste streams, and invoices in Core	2.0 d	4.0 d
Automated PDF generation and scheduled report dispatch by email	3.0 d	5.0 d
Executive Management Dashboard (daily vehicle revenue, ticket margins, tonnage graphs)	3.0 d	5.0 d
Hazardous waste consignment reports (exportable in Environment Agency standard formats)	2.0 d	5.0 d
Customer Portal: automated weekly/monthly client report emails & self-billing invoice workflows	3.0 d	8.0 d

Data Migration & Deployment

21.0 – 36.0 Days

Target: 28.5 Days

⚠ THE CHALLENGE TODAY

High commercial risk of corrupting complex customer price matrices (74+ line items) and historical records across 9 entities when cutting over from legacy WeighSoft.

✓ REBUILD SOLUTION & OPERATIONAL IMPACT

100% Verified Price Matrix & Historical Data Migration

✓ Automated validation scripts verify every single custom customer price before cutover.

✓ On-site hardware commissioning and live testing for both weighbridges and Sage connectors.

✓ Prevents post-launch invoice disputes and credit note backlog when tickets go live.

✓ Includes dedicated UAT bug-fix sprint and hypercare launch support for staff confidence.

REQUIREMENT / SYSTEM CAPABILITY	MIN DAYS	MAX DAYS
Data migration of customers, active jobs, and historical invoices from legacy WeighSoft	10.0 d	15.0 d
Migration of reference & lookup data (SIC codes, zones, EWC, outlets, vehicles, containers)	3.0 d	5.0 d
Setup and on-site testing of the local Weighbridge edge API	1.0 d	2.0 d
Setup and on-site testing of the Sage connector API bridge	2.0 d	4.0 d
User Acceptance Testing (UAT) defect remediation, stabilization & hypercare go-live support	5.0 d	10.0 d
